Same occupancy frequency leaves sparse distinct-cell temporal contrasts

Nearest observed-anchor node minus deduplicated original / background-only / historical-reference cells

	100m m / cross 5	100m m / cross 10	200m m / cross 5	200m m / cross 10	300m m / cross 10
Time since last occupancy (seconds)	**UNKNOWN** 0 / 9 eligible frames	**Δ = -7.99 s** 3 / 3 frames; 100% same sign	**UNKNOWN** 0 / 5 eligible frames	**UNKNOWN** 0 / 10 eligible frames	**Δ = -9.02 s** 1 / 1 frames; 100% same sign LOW SUPPORT (n < 3)
Longest previous run (recorded frames)	**UNKNOWN** 0 / 4 eligible frames	**Δ = +1 frames** 1 / 1 frames; 100% same sign LOW SUPPORT (n < 3)	**UNKNOWN** 0 / 4 eligible frames	**UNKNOWN** 0 / 4 eligible frames	**UNKNOWN** 0 / 0 eligible frames
Previous episodes (count)	**UNKNOWN** 0 / 4 eligible frames	**Δ = -1** 1 / 1 frames; 100% same sign LOW SUPPORT (n < 3)	**UNKNOWN** 0 / 4 eligible frames	**UNKNOWN** 0 / 4 eligible frames	**UNKNOWN** 0 / 0 eligible frames
Recent occupancy fraction (5 preceding frames)	**UNKNOWN** 0 / 9 eligible frames	**Δ = +0.2** 3 / 3 frames; 100% same sign	**UNKNOWN** 0 / 5 eligible frames	**UNKNOWN** 0 / 10 eligible frames	**Δ = +0.2** 1 / 1 frames; 100% same sign LOW SUPPORT (n < 3)

Positive median difference
Negative median difference
UNKNOWN: no finite distinct-cell pair
Finite contrast, fewer than 3 frames

Exact same frame and H imply identical F and p = (H + 1)/(F + 2). All contrasts require F >= 5 and different centroid cells.

Recency / recent fraction retain H >= 1; run / episodes exclude H=0 and H=1 (require H >= 2). Same-cell ties are excluded.

No quantity meets the frozen common-support and same-direction criterion in all five sequences. Missing support is not a zero effect.

Observed anchors are selected DEV_SILVER; distinct cells do not certify object identity or independent samples.
